Personal AT

Your Personal AI Tutor – Learn Anytime, Anywhere

Many high school and university students struggle to get extra help with their schoolwork because they cannot always attend their teachers' office hours.

Some students live far away, have extracurricular activities, or have busy schedules that make it difficult to meet with teachers.

Personal AT solves this problem by giving students access to an AI tutor whenever they need academic support. Students can ask questions, receive explanations, and study at their own pace.

The main target users are students in 9th grade and above.

This includes:

- High school students.
- AP (Advanced Placement) students.
- University students.
- Community college students.
- Students who need additional help understanding school subjects.

Five Key Features

1. AI Tutor Chat

Students can ask questions about different school subjects and receive instant answers and explanations from an AI tutor.

2. Homework Helper

Students can type or upload a picture of a homework question and receive step-by-step help understanding how to solve it.

3. Smart Flashcards

AI creates digital flashcards from study notes to help students remember important information.

4. Personalized Study Planner

Students enter their assignments and upcoming exams, and AI helps create a study schedule that fits their availability.

5. Practice Quizzes

AI generates practice questions based on what students are learning so they can test their knowledge and prepare for exams.
