- **Version 1 Features**
  - AI Tutor Chat- To have a conversation with an AI helper to replace the need to contact teacher and the main purpose of the whole application
  - **Homework Helper (text input first) - This lets students type out the question they're having trouble with, so the program knows what the problem is and how it can help.**
  - Practice Quizzes- to strengthen their areas that need help make it feels like a tool that can help with problems instead of just giving answers
  - Saved chat history- this would help alot if the app shutdowns and also eliminates the need to explain to the assistant what subject and what course that student it is taking for it to help with the questions that, the student may have
  - Accounts- for the assistant have a background on the student for them to teach them at their grade level and what type of methods to use
  - No direct answers guidelines – for the student to actually learn and no just copy and paste answers, the assistant will not be giving answers directly but going step by step and hints for the student to have for them to actually part take in learning
- **Future Features**
  - Smart Flashcards- which is like practice quizzes- would be like a more specialized quiz that we can give instead of simple multiple-choice questions
  - Personalized Study Planner – having given assignments and notes from the student can enable us to create a study planner fit to the schedule of the student and the material that they have to cover.
  - **Photo Upload for Homework Helper** *(if not ready for V1)- depending on if we can put in the first version, but this feature would help the student avoid typing the entire questions and if it is a written question, having a photo upload would eliminate the tedious need to type everything for help*
  - *Gamifications- implementing awards and achievements will make them more invested in trying to reach those goals, also it helps with building healthy learning habits*
  - *Voice Input- addition to the photo upload, to make it easier for the student to ask the assistant for questions about a subject with their voice if they are occupied with their hands*
  - *Teacher connection (not applied to everyone) - helps with our main problem that students can't reach their teachers under some circumstances, which allows the teacher to know the progress and what the student is needing help no*
